

Energy

Everything we have and need
Our planet provides.
But, for how long resources
Will last?
I`m worried, ... people don`t see
What they are doing to Earth.
There is little coal in mines,
The forests die each day,
The river beds are without water.
How can hydroelectric power stations
Produce electricity, then?
There are acid rains
We have no place to ride.
We spend electircity, way too much
Without any long term planning.
Is there a prodigy among us
To offer the solution:
How to stop pollution,
So the sky stops crying
And the acid rains stop too,
So the green trees start to grow?
Life returns when pollution stops,
Medows of green grass and flowers
Will spread all over.
Bird`s songs will wake up the children
And all the people will be happy.
Let`s be reasonable and save
All the presents nature gave us
So the future generation.
Can have reasons to thank us.
Save the energy, save the planet,
Save domestic and the wild
For me, for you and your grandchild.
